To Whom It May Concern:

Re: Docket No. 98N-0044: F.D.A. Proposed Rule to restrict information about benefits of Dietary Supplements

It has come to my attention that the FDA has drafted a memorandum called MOU that is designed to limit the practice and interstate distribution of compounded drugs. One of the main sources for my injectables has been closed due to FDA meddling. It has effected not only doctors but the patients we serve, all of whom are *taxpayers* and *voters*. There are controlling parties who are threatened by the increase interest in Holistic and alternative medicine. Closing down labs will not halt this interest, but will result in making my job more difficult and costly which will directly effect the patient. Alternative medicine will not go away, as I have a thriving practice to testify to this. Please

I would like to voice my concern request that the MOU be amended.

Sincerely,

Debora Chelson NMD
